

ABSTRACT OF THE DISCLOSURE

Disclosed are compositions, useful for stimulating hair growth in warm-blooded animals in need thereof, that combine at least one peptide copper complex and Minoxidil. The disclosed compositions may be formulated so as to be suitable for topical application or for intradermal injection to areas of skin in need thereof. Also disclosed are methods for stimulating hair growth to thereby treat various hair growth afflictions, such as androgenetic alopecia, alopecia areata, or secondary alopecia. Generally, the disclosed methods comprise applying, topically or via intradermal injection, a stimulatory effective amount of a disclosed composition to an area of a patient's skin in need thereof. In one embodiment, the disclosed method employs such application in a continued and periodic fashion to arrest and/or reverse androgenetic alopecia.
